

**FOR IMMEDIATE RELEASE
February 18, 2014**

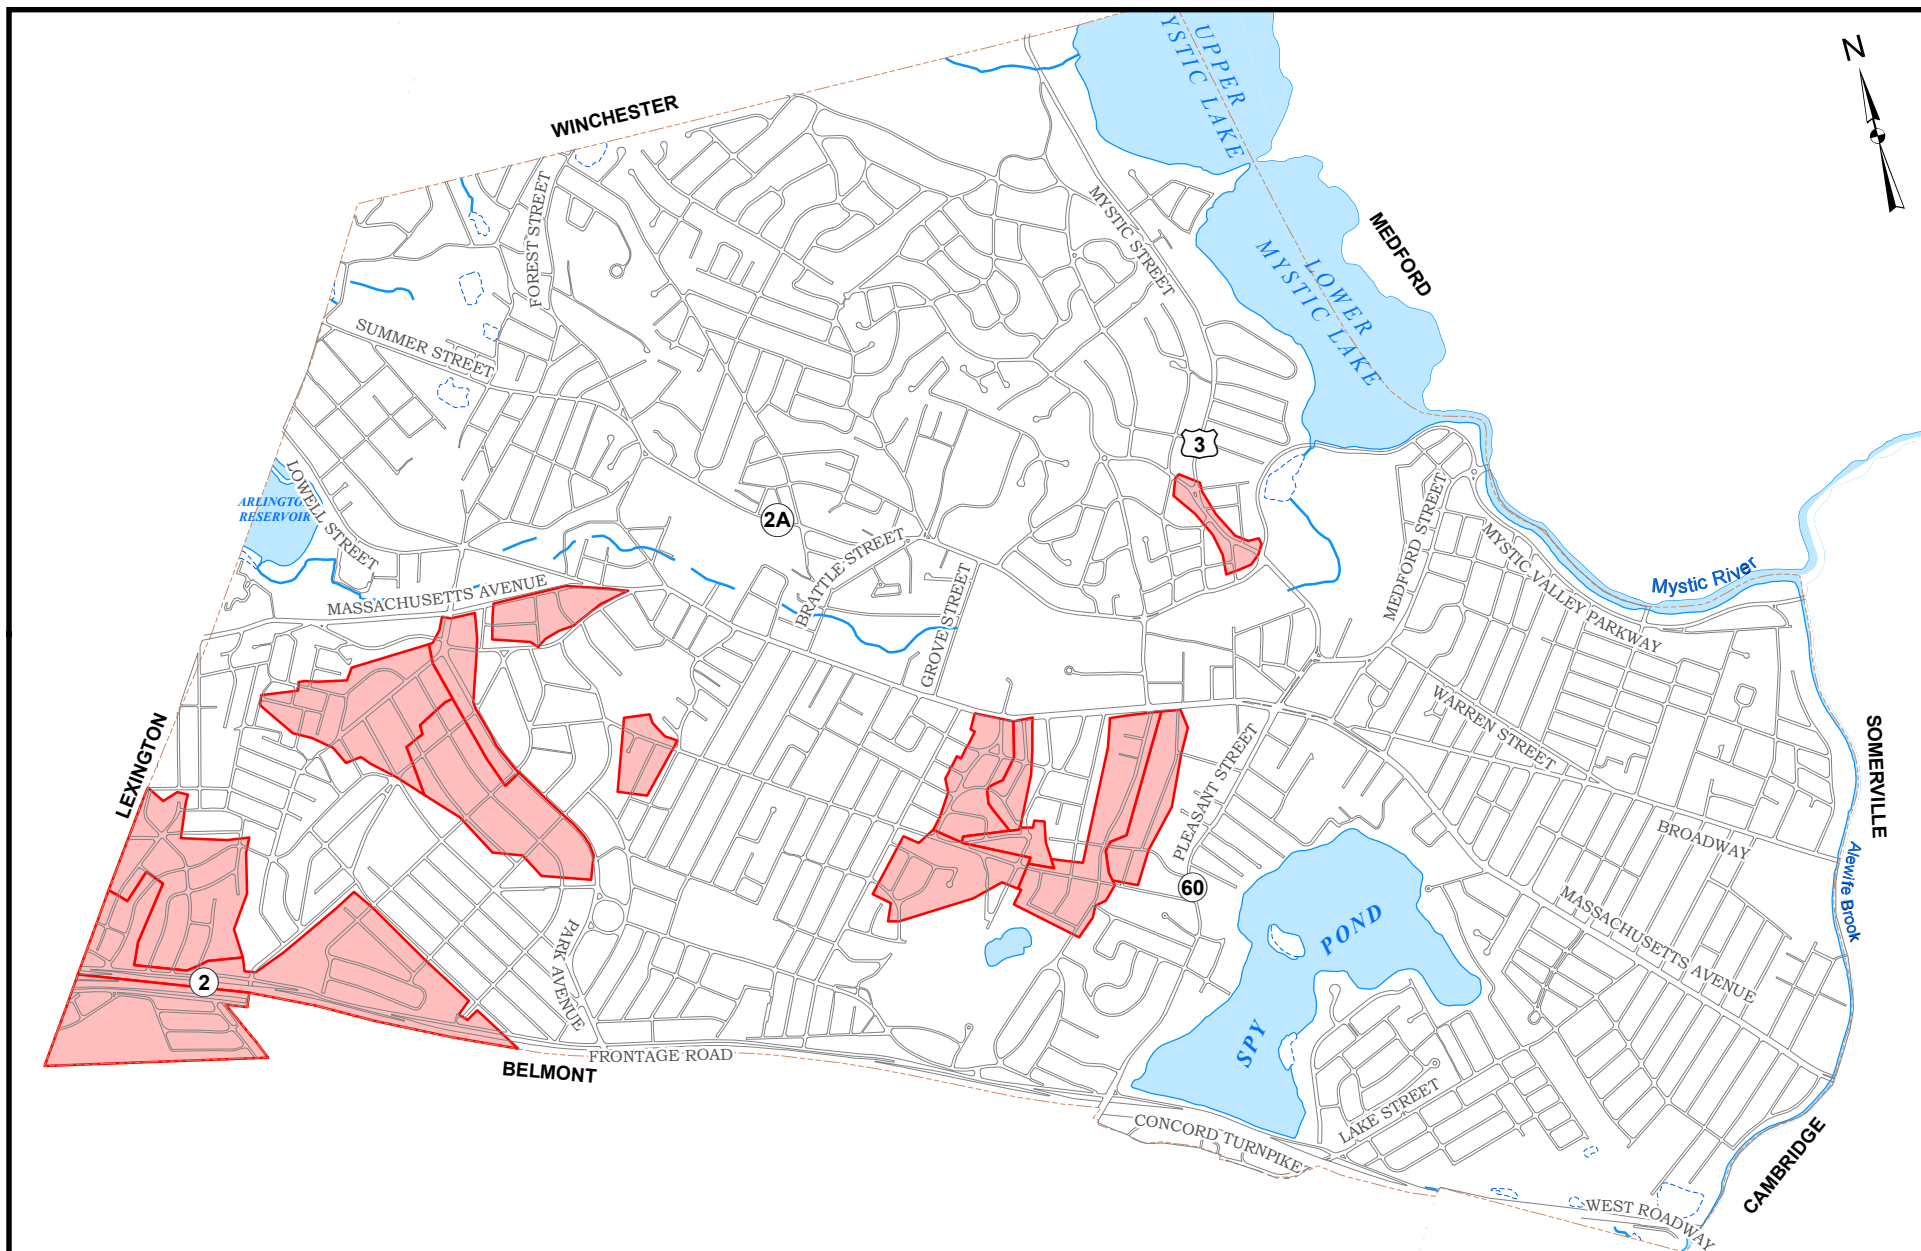

Area # 8 Sanitary Sewer Investigation Project

The Town of Arlington has initiated a program to reduce the amount of groundwater (infiltration) and rainwater (inflow) entering the sewer system. Through this program, sources of Infiltration and Inflow (I/I) will be identified and removed. When these sources are removed, the quantity of flow entering the Arlington sewer system and the risk of sewer backups and overflows will be reduced.

The Town's consultants, Weston & Sampson Engineers, Inc. and their subconsultant, New England Pipe Cleaning Company, will be conducting sewer manhole and sewer pipe inspections to identify sources of infiltration and inflow.

Crews will be performing inspections between February 20, 2014 and May 30, 2014. Work will be performed Monday through Friday, between 7:00 a.m. and 5:00 p.m. The areas to be inspected are highlighted in red on the attached project map.

Persons performing these inspections will be in clearly marked trucks and will be wearing bright vests. Work will be conducted primarily within the Town's right-of-way and private residences should not be affected.
